

BUSINESS REQUIREMENTS DOCUMENT (BRD)

Labaid InsureTech Company Limited

1. Document Purpose

This BRD defines the **business needs, functional specifications and technical requirements** for developing an advanced InsureTech platform that aligns with:

- Labaid Group's health ecosystem
- IDRA regulatory framework
- Modern InsureTech/HealthTech best practices
- Bangladesh's digital financial landscape
- The 2026–2028 business roadmap

This BRD shall guide **technology vendors, internal development teams, UX teams and business stakeholders** throughout platform design, development, testing and deployment.

2. Business Overview

Labaid InsureTech aims to modernize insurance distribution through:

- **Digital-first experiences**
- **AI-driven underwriting & claims automation**
- **Mobile app-based onboarding**
- **Micro-insurance and inclusive products**
- **Integration with LabAid health services**
- **Partner-driven embedded insurance**

The platform will support **Life, Health, General, Agriculture and Device Insurance** through a unified, seamless mobile experience.

3. Business Objectives

Short-term (2026)

- Launch core InsureTech platform
- Enable digital onboarding, policy purchase and claims
- Achieve 40,000+ active policies
- Integrate with insurers and payment gateways

Mid-term (2027)

- Introduce AI underwriting
- Automate 80% of claims
- Achieve break-even (Q3 2027)
- Launch Super-App 2.0

Long-term (2028)

- Become Top 3 InsureTech platform in Bangladesh
 - Expand regionally (Nepal, Bhutan, Maldives)
 - Implement predictive risk scoring, behavioral pricing, IoT integration
-

4. Project Scope

4.1 In-Scope

- Customer mobile app (iOS/Android)
- Web admin portal
- Agent/Partner portal
- Policy purchase, renewal, cancellation
- Digital KYC & verification
- Claims submission & automation
- Payment integrations (bKash, Nagad, cards)
- Notification system (SMS, push, email)
- Integration with insurer APIs
- Integration with LabAid hospital systems

4.2 Out-of-Scope (Phase 1)

- Full AI-driven underwriting (Phase 2: 2027)
- IoT/Telematics integration (Phase 3: 2028)
- Cross-border insurance sales (2028)

5. User Groups

User Type	Description
Customer / Policy Buyer	App users purchasing policies
Partner/Agent	Distributors (hospitals, MFS, telcos, e-commerce)
Insurer Underwriter	Validates policy and approves underwriting
Claims Officer	Processes and approves claims
Super Admin	Full platform control
Support/Call Center	Customer assistance and issue resolution

6. High-Level User Journey Flows

6.1 Registration & Login

- Signup/Login
- OTP Verification
- Personal Info
- Nominee Info
- Review & Complete Registration

6.2 Policy Discovery & Selection

- Home screen shows product categories
- Policy list with premium & benefits
- Compare policies
- View details

6.3 Policy Purchase Workflow

As shown in UI screens (multi-step forms)

1. Select policy
2. Enter personal details

3. Upload documents
4. Review summary
5. Payment
6. Confirmation

6.4 Claims Journey

- Enter policy number
- Upload claim documents
- Receive updates

6.5 Policy History & Tracking

- Past policies
- Current active policies
- Claim history
- Renewal alerts

7. Functional Requirements

7.1 Registration & Authentication

Business Requirements

- Users must verify identity via mobile OTP
- KYC should follow IDRA guidelines
- Nominee capture is mandatory for Life/Health insurance

Functional Requirements

- OTP generation & validation
- Duplicate number detection
- Mandatory fields: name, DOB, NID/passport, nominee data
- Optional: health declarations, lifestyle questions

7.2 Policy Marketplace

Business Requirements

- Users must browse and compare policy options with transparent benefits
- Pricing must match insurer-approved rates

Functional Requirements

- Product list API to fetch available plans
- Sorting and filtering (premium, coverage type)
- Compare up to 3 policies
- Detailed policy information page

7.3 Policy Purchase Module

Business Requirements

- Paperless onboarding
- Real-time underwriting for low-risk policies
- Automated document verification

Functional Requirements

- Multi-step purchase journey (aligned with screens)
- Document upload: NID, photo, medical file (if needed)

- Payment gateway integration
 - Auto-generation of digital policy document
-

7.4 Claims Module

Business Requirements

- Simple and fast claim initiation
- Digital evidence submission
- 1–3 working days settlement (where possible)

Functional Requirements

- Claim request form (policy number prefill)
 - Document upload
 - Claims history
 - Status notifications
 - Admin approval workflow
-

7.5 Policy Management

Functional Requirements

- View active policies
 - Renewals
 - Cancellation request
 - Download policy documents
 - Policy modification requests (address, nominee)
-

7.6 Notification System

Requirements

- Push, SMS, email
 - Renewal reminders
 - Claim updates
 - System alerts
 - Marketing campaigns
-

7.7 Admin Portal

Key Capabilities

- User management
 - Product & pricing management
 - Claims management
 - Dashboard & reporting
 - API integration controls
-

8. Non-Functional Requirements (NFR)

8.1 Performance

- App load time < 3 seconds
- Payment processing < 10 seconds
- Claim submission processing < 5 seconds

8.2 Security (IDRA-aligned)

- AES-256 encryption for data at rest

- TLS 1.3 for data in transit
- MFA for admin users
- Secure OCR storage for sensitive documents

8.3 Regulatory Compliance

- IDRA reporting frameworks
- Automated KYC validation
- AML/CFT compliance

8.4 Scalability

- Cloud-native (AWS/Azure)
- Auto-scaling microservices

8.5 Availability

- 99.5% uptime
- Disaster recovery with < 15 min RTO

9. System Integrations

Core Integrations

System	Purpose
Insurer API	Premium computation, underwriting, policy issuance
Payment Gateways	bKash, Nagad, Visa/Mastercard
LabAid Hospital Systems	Cashless IPD/OPD
CRM	Support tickets, communication
Notification Engine	SMS/Email/Push
Analytics Engine	KPI tracking, AI models

10. Data Requirements

Customer Data

- Personal info, nominee info, contact info
- KYC documents
- Health declarations

Policy Data

- Product details
- Premium tables
- Policy status & history

Claim Data

- Claim type, documents, status trail

System Data

- Audit logs
- API logs
- Notification logs

11. Acceptance Criteria

System-wide

- All journeys must be fully digital (registration → purchase → claim)
- 0% paper dependency for standard products

- 98%+ successful OTP delivery rate
- Claims module must allow successful upload of documents

Business

- All policies must be issued with valid insurer authorization
 - Payment confirmation must auto-issue policy certificate
-

12. Future Enhancements (2027–2028)

AI & Predictive Systems

- AI underwriting engine
- Driving score & motor UBI models
- Health scoring integration

IoT Integration

- Device diagnostics
- Vehicle telematics
- Cattle & crop sensors

Super-App Features

- Telemedicine
- Health passport
- Pharmacy ordering
- Wellness rewards

Partner API Marketplace

- E-commerce
 - Telcos
 - Ride-sharing
 - MFIs & rural networks
-

13. BRD Sign-off

This Hybrid BRD reflects the **complete functional, business and technical requirements** for the modern InsureTech platform designed for Bangladesh's evolving digital ecosystem.

Approval of this document authorizes the development team to proceed with:

- UI/UX finalization
- Technical architecture design
- System development
- Integration workstreams
